& DAY CARE
LIMITED**

A Leading Veterinary Hospital

a concern of **PROMIXCO**
caring for a healthy life

Introduction

LD Veterinary Hospital & Day Care Limited created history in Bangladesh by opening its doors in 2019 with a full-service, small animal veterinary hospital providing comprehensive medical, surgical, and dental care. The LD Veterinary Hospital is facilitating day-to-day treatment, immunization, vaccination, artificial insemination, surgical intervention, etc. of livestock, pets, small animals, and bird.

We also try to create an impact when special diagnostic procedures are required. The facility includes a well-stocked pharmacy, an in-hospital surgery suite, in-house x-ray capabilities, a closely supervised hospitalization area, and outdoor boarding kennels with outdoor walking areas. At LD Veterinary Hospital we strive to offer not only sound advice but also optimal veterinary care, thus allowing you the enjoyment of your companion for a maximum number of years. Our job is not only to treat your pet when he or she isn't feeling well, but also to help you learn how to keep your best friend happy and healthy.

Considering the scenario in Bangladesh and the need to promote an animal-friendly environment, LD Veterinary Hospital & Day Care Limited wishes to expand the range of services and diagnostic capacity day by day.

History & Background of LD Veterinary Hospital

In the early days of 2018, one most beloved pet dogs, LINIS, belonging to the Managing Director of PROMIXCO Group Ms. Mousumi Islam had been suffering from genital complications. She tried her best to take all possible measures for a confirmatory diagnosis of the suffering, but all attempts ended in vain. At one stage, she became puzzled & came to Govt Central Veterinary Hospital, 48 Kazi Alauddin Road, Dhaka, to treat her beloved pet.

Despite of limitations of diagnostic facilities, the Govt veterinary Hospital took necessary measures for primary treatment & subsequent collection of samples for a confirmatory diagnosis. Ms. Mousumi Islam took blood samples & went to Singapore for an intensive investigation. She made a teleconference with doctors working in Singapore & Senior doctors working at Government Central Veterinary Hospital. After Teleconference & laboratory investigation, it was confirmed that LINIS had been suffering from severe Complicated Pyometra and LINIS was dying. Under such circumstances, with her personal life at stake; Ms. Mousumi Islam was out of routine life analyzing the probable consequences of LINIS. Finally, a group of Veterinary doctors from the central veterinary hospital performed successful surgery to remove the Uterus containing a considerable amount of pus weighing 2.6 kilos (Ovariohysterectomy because of Severe Pyometra). After proper post-operative measures & follow-up treatment LINIS recovered within 15 days.

The whole incident moved her seriously & inspired her a lot to establish a private Veterinary Hospital. She was too committed to establishing a private veterinary hospital where all diagnostic & treatment facilities would be available along with surgical intervention. Finally, LD Veterinary Hospital began in January 2019 under the dynamic leadership of the Managing Director of PROMIXCO Group Ms. Mousumi Islam. The LD Veterinary Hospital & Day Care Limited came out as a sister concern of the PROMIXCO Group.

Services of LD

Diagnostic and Therapeutic Services: Our hospital is equipped to provide diagnostic and therapeutic services to care for your pets' complete health care needs. Most recently we have added a therapy laser to help senior pets with chronic pain conditions.

Surgical Services: Our surgical suite provides for the performance of a wide variety of surgical procedures. We offer both traditional and laser surgery options for most soft tissue procedures.

Anesthesia: We utilize the safest available anesthetics to provide an extra margin of safety, especially for our older or high-risk patients. We take great care to use the safest, individualized anesthetic protocol for your pet, hence we may often request blood work to better select the best drugs. Using modern equipment such as a pulse ox and blood pressure machine, the patient's vital signs are monitored during anesthetic procedures.

Internal Medicine Consults: The great majority of our internal medicine cases are treated in-house, including diabetes, Cushing's and Addison's disease, liver and kidney disease, Lyme disease, cancer, and many infectious diseases. If there is a particularly perplexing case, we often utilize contacts with specialists in both private practice and university settings, or in some cases advise our patients to travel to see a specialist for the highest possible level of care.

Radiology Services: Our on-site, modern X-ray equipment provides high-quality radiographs to aid in the quick diagnosis of many disorders. We now offer digital X-rays along with a hand-held

Nomad that takes dental X-rays. This allows our staff to take a clearer more accurate image for diagnostic purposes. It also allows our doctors to send the images to any specialist thru the internet, and even copy the images onto a CD for you to keep with your animal's medical record. Electrocardiography Services: We provide ECG services through Cardiopet, a nationally recognized team of cardiologists that read, interpret, and provide specialist consultation on your pet's ECG.

Dentistry: Our dental services include teeth cleaning and polishing, tooth extractions, and minor oral surgery. We now have a handle-held dental X-ray machine that allows our doctors to take X-rays of your pet's teeth. This helps our doctors diagnose any problems with your animal's teeth under the gums that we normally would not be able to see.

Laboratory: Our in-house laboratory facilities provide serum chemistry, hematology, urinalysis, and parasite testing. We also utilize commercial veterinary laboratories for specialized diagnostics and consultations.

Permanent Identification: We offer AKC Reunite brand microchip identification. Microchips may be implanted in the office or during any anesthesia procedure. We also provide lifetime license forms that can be submitted for your dog after microchipping.

Pharmacy: We maintain a complete inventory of pharmaceuticals, vitamins, shampoos, flea and tick control products, and heartworm preventatives to meet the needs of your pet. We also carry a full line of prescription diets from several different companies.

Individualized Flea and Tick Control Programs: We develop programs for the specific needs of your pet and your own particular environmental situation. We will review with you the best ways to control fleas in your house, flea and tick issues in your yard, and your pet.

Dietary Counseling: We will provide guidance regarding your pet's nutritional needs for each life stage, including dietary requirements for growth, weight maintenance, and performance. Nikki is our food specialist and can help you with your needs to pick the best diet, order prescription foods, etc.

Behavioral Counseling: We can provide advice regarding the correction of problems such as excessive barking, chewing, spraying, scratching, digging, house soiling, and aggression.

Boarding: We provide pet boarding as a service to our clients. All boarders receive personal attention from our caring staff. Pets may be dropped off and picked up during regular business hours Monday through Saturday as well as extra hours on Saturday and Sunday.

Activities of LD Veterinary Hospital:

- 1) General Checkup:** Routine services for consultation & treatment of sick animals.
- 2) Emergency management services:** supplying Oxygen, nebulization, control of bleeding, and emergency surgeries as needed.

7) Food & Accessories: Supplying Food & accessories for pet animals.

8) Pet Breeding: We offer & practicing pet breeding services for dogs & cats in our own facility in Gazipur

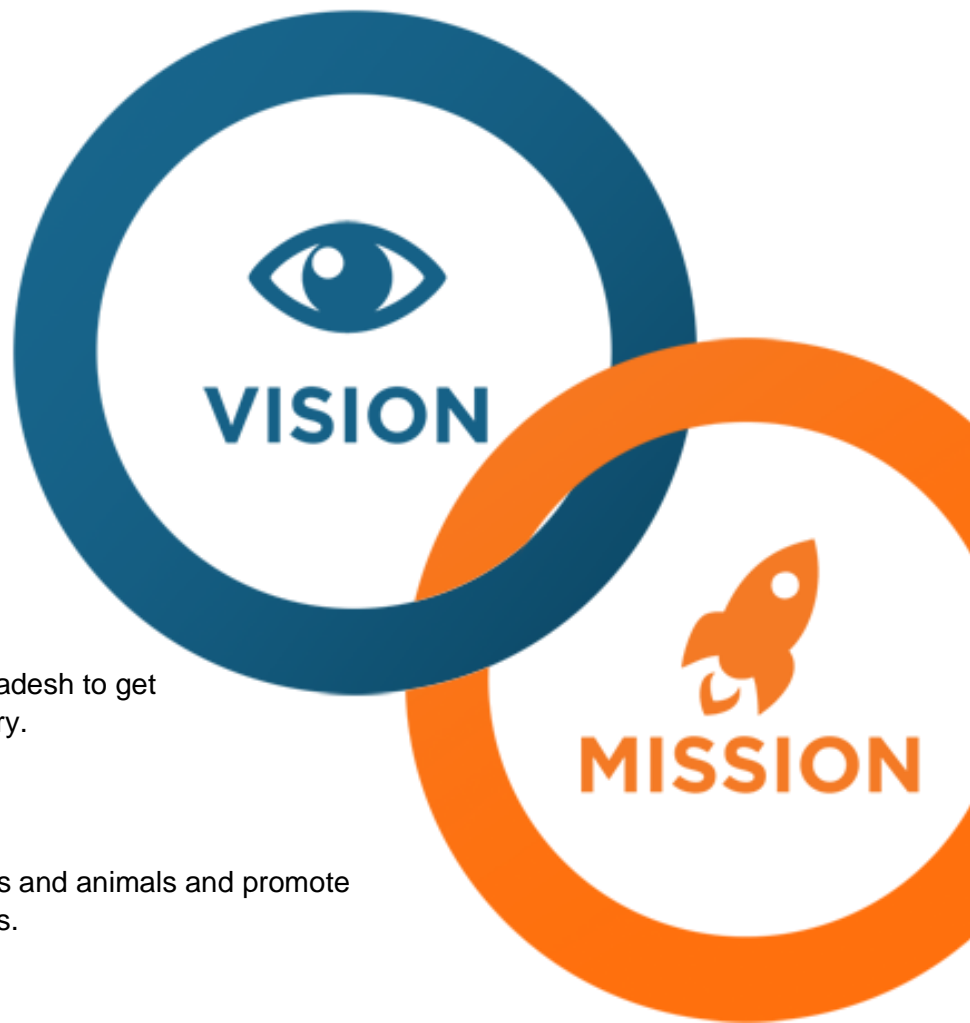

9) Rescue operation: picking the sick, disabled stay dogs & cats, flooding, and extending Veterinary services for their recovery & ultimate Rehabilitation is also a goal of LD veterinary hospital activities.

10) K9 Training: K9 training, also known as canine training, refers to the process of teaching and conditioning dogs to perform specific tasks or follow commands. These specially trained dogs, commonly known as K9s, are used in various fields such as law enforcement, search and rescue, military operations, and service work.

Vision

To facilitate the pet owners in Bangladesh to get world-class support within the country.

Mission

To expand the love between humans and animals and promote the adoption of different kinds of pets.

Objectives of the Project

1. To create a more suitable environment for animal lovers in Bangladesh to adopt and grow a pet
2. Provide more diagnostic and surgical services within the reach of potential customers
3. Try to elevate the rescuing operations in Bangladesh for pets so that pets do not get harmed during the natural calamity
4. Support pets that face mortal peril due to unwanted circumstances and rescue them to provide accommodation and possible adoption
5. Increase the market share of pet foods and all kinds of pet-related items in Bangladesh
6. Provide possible support for pets that are not adopted with food and accommodation from time to time
7. Raise an awareness program in Bangladesh about pet adoption and promote the usage of pets as supporting friends during necessary times
8. Increase the overall life expectancy of pets in Dhaka as well as in other areas by providing life-supporting treatments
9. Increase the goodwill of the Bangladeshi pet sector among Asian countries
10. Support the pet owners who look for quality services and medical treatment for their pets to the fullest
